

1. A method of administering exam content from a server to at least one client over a network, the method comprising:

registering at least one exam submitted by an exam provider with the server;

generating a transcript in response to answers submitted by a student to at least one exam question resident on the server; and

providing access to the transcript to at least one third party.

2. The method of claim 1 further comprising providing an exam content generator with access to registered exams on the server.

3. The method of claim 1 further comprising providing an exam grader with access to a student's answers on the server.

4. The method of claim 1 further comprising transmitting a video frame of the student to the server at at least one random point in time while the student is taking the exam.

5. The method of claim 4 wherein the transcript further comprises at least one video image of the student.

6. The method of claim 1 further comprising registering a plurality of exams with the server.

7. The method of claim 1 further comprising recording a student's answers to at least one exam question presented by the server; and

grading the student's answers to generate an exam result.

8. A system for administering exam content to a number of clients over a network comprising:

a processor;

a memory coupled to the processor;

a computer readable medium coupled to the processor, the computer readable medium containing executable program instructions for:

registering at least one exam submitted by an exam provider with the server;

generating a transcript in response to answers submitted by a student to at least one exam question resident on the server; and

providing access to the transcript to at least one third party.

9. The system of claim 8 further comprising instructions for providing the exam grader with access to the answers submitted by the student.

10. The system of claim 8 further comprising instructions for providing an exam content generator with access to the registered exams.

11. The system of claim 8 wherein the server comprises a means for accepting and storing video images of the student.

12. The system of claim 8 wherein the server comprises a means for registering a plurality of exams with the server.

13. The system of claim 8 wherein the server comprises a means for recording a student's answers to at least one exam question presented by the server; and  
a means for grading the student's answers to generate the exam result.

14. A computer program product on a computer readable medium for use in a data processing system for administering exam content from a server to a number of clients over a network, comprising:

instructions for registering at least one exam submitted by an exam provider with the server;

instructions for generating a transcript in response to answers submitted by a student to at least one exam question resident on the server; and

instructions for providing access to the transcript to at least one third party.

15. The product of claim 15 further comprising instructions for transmitting a video frame of the student to the server at at least one random point in time while the student is taking the exam.

16. The product of claim 15 further comprising instructions for providing an exam content generator with access to registered exams on the server.

17. The product of claim 15 further comprising instructions for providing an exam grader with access to a student's answers on the server.
18. The product of claim 15 further comprising instructions for registering a plurality of exams with the server.
19. The product of claim 15 further comprising instructions for recording a student's answers to at least one exam question presented by the server; and instructions for grading the student's answers to generate the exam result.
